Medical monitoring is an essential component of the clinical research process. Medical monitors provide medical expertise and oversight for the entire clinical trial, from initial study design through final study close-out.

ViewZ designs and manufactures the medical monitors and medical display solutions address imaging needs, including mammography displays, PACS displays, endoscopy, x-ray, ultrasound or sectional imaging, and provide a critical part of the diagnostic chain.

DIAGNOSTIC DISPLAYS

Diagnostic Display combines unique LCD panel with the latest IPS technology, which provides top image quality. Its high brightness and contrast is beneficial to show the details, ensure the radiologist make more accurate diagnosis.

Accurate Image Quality

ViewZ's offset correction function can quickly stabilize the brightness level when the display starts up or wakes up from sleep mode, allowing you to view the most accurate images right away. In addition, its sensors are also used to measure backlight brightness, automatically compensating for fluctuation in display brightness caused by ambient temperature and aging, keeping the brightness contrast

Precise Diagnosis

ViewZ measures and sets each grayscale hue carefully, to comply with the DICOM standard, and can be off-line automatic DICOM verification.

ViewZs' monitors can apply for PACS Systems (picture archiving and communication system) are a medical imaging technology which provides economical storage, retrieval, management, distribution and presentation of medical images. Electronic images and reports are transmitted digitally via PACS systems.

A photograph of a modern surgical suite. The room is brightly lit with overhead surgical lamps. In the foreground, there is a large, white medical cart with multiple monitors and control panels. To the left, a desk holds several monitors displaying medical images, including a large circular scan. A large, flat-screen monitor is mounted on a stand in the center. The background shows a clean, clinical environment with a window and more medical equipment.

SURGICAL DISPLAYS

Surgical Displays deliver Ultra High Definition (UHD) and 4K visualization within the surgical field. These surgical monitors perform wider color space and necessary video interface such as a single 12G-SDI or quad SDI in the neurosurgical, ophthalmology or endoscopy market
